EXPERIMENT-8

8. Add a Login component using ReactJS. User should be able to login, using pre-defined logins. Session should be maintained using react hooks.

Usesession.js

```

import { useState, useEffect, useCallback, useRef } from 'react';

// Custom hook for session management
const useSession = (timeout = 60000) => { // Default timeout is set
  to 1 minutes
  const [session, setSession] = useState(() => {
    const storedSession = localStorage.getItem('session');
    return storedSession ? JSON.parse(storedSession) : null;
  });

  const timeoutRef = useRef();

  const clearSession = useCallback(() => {
    setSession(null);
    localStorage.removeItem('session');
  }, []);

  const resetTimeout = useCallback(() => {
    if (timeoutRef.current) {
      clearTimeout(timeoutRef.current);
    }
    timeoutRef.current = setTimeout(clearSession, timeout);
  }, [clearSession, timeout]);

  const saveSession = (sessionData) => {
    setSession(sessionData);
    localStorage.setItem('session', JSON.stringify(sessionData));
    resetTimeout();
  };

  useEffect(() => {
    if (session) {
      resetTimeout();
    }
  });
}

```

```

    return () => {
      if (timeoutRef.current) {
        clearTimeout(timeoutRef.current);
      }
    };
  }, [session, resetTimeout]);
}

return { session, saveSession, clearSession };
};

export default useSession;

```

App.js

```

import React from 'react';
import useSession from './useSession';

const App = () => {
  const { session, saveSession, clearSession } = useSession(60000);
  // 1 minute timeout

  const handleLogin = () => {
    // Simulate a login and save session data
    const sessionData = { user: 'John Doe', token: 'abc123' };
    saveSession(sessionData);
  };

  const handleLogout = () => {
    // Clear session data on logout
    clearSession();
  };

  return (

      <h1>Session Management in React</h1>
      {session ? (
